F8 · Magic-state injection + cultivation circuit, color code d1 = 3 (15 qubits, 40 time steps)

cultiv.make_inject_and_cultivate_circuit(dcolor=3, inject_style='unitary', basis='Y'), drawn before noise is added. Orange = S/S† (Stim cannot simulate T, so S stands in for it; T error = 2 × S error). |0⟩/|+⟩ = reset, M/Mx = measurement. If any of the 14 detectors fires, the shot is discarded (31.3% at p = 0.1%); kept shots have logical error 1 in 1,390,000.
