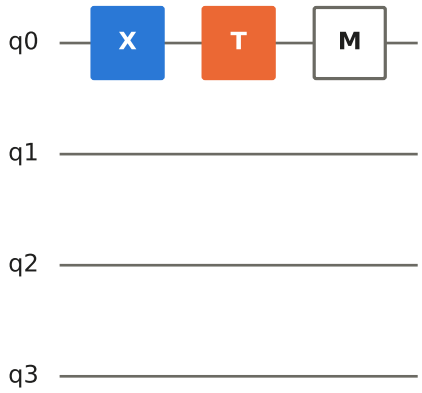
F9 · Input circuits given to the pipeline (before compilation)

(a) useless T: OpenQASM 3 input

```
OPENQASM 3.0;
include "stdgates.inc";
qubit[4] q; bit[4] c;
x q[0];
t q[0];
measure q[0] -> c[0];
```

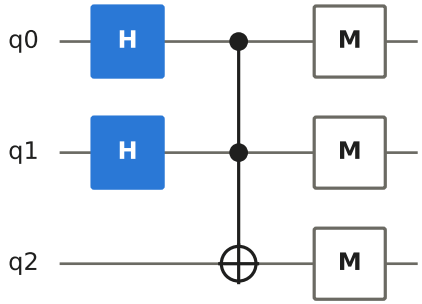
as a circuit



(b) Toffoli AND: OpenQASM 3 input

```
OPENQASM 3.0;
include "stdgates.inc";
qubit[3] q; bit[3] c;
h q[0];
h q[1];
ccx q[0], q[1], q[2];
c = measure q;
```

as a circuit



full_stack_sim.EXAMPLES exactly as written. (a) q1-q3 are declared but unused; the T right before the measurement cannot change the result. (b) Toffoli (CCX): q2 = q0 AND q1, with q0 and q1 put in superposition by H, so all four input pairs occur. Compiled versions: F6.
